

West Coast Turf's new Sealsle1 is the ideal turfgrass for areas facing water limitations or restrictions on fresh water use. With its extremely high tolerance for salt, Sealsle1 can take most types of alternate water sources including gray or reclaimed water, recycled wastewater and even ocean water. This improved seashore paspalum cultivar exhibits a richer dark-green color than bermudagrass and a beautiful uniform texture. Sealsle1 is also drought and wear tolerant and requires less water and fertilizer than other warm-season grasses. For use on sports fields, golf course fairways and roughs, and parks.

For sports fields, golf courses and parks.

Features and Benefits

Color

- Rich dark green, darker than bermudagrass.

Texture

- Medium-fine, similar to hybrid bermudagrass.

Performance

- Tolerates high levels of salt in irrigation water and soil.
- Tolerates extremely high or low pH levels.
- Tolerates a wide range of alternate water sources including reclaimed water, recycled wastewater and sea water.
- Requires less water, fertilizer and pesticides than other warm-season grasses.
- Highly drought and wear tolerant, similar to bermudagrass.
- Tolerates oxygen-starved, water-logged soils better than bermudagrass.
- Recovers very quickly from injuries such as divots.
- Handles a wide range of mowing heights.

Climate

- Thrives in warm to hot climates, USDA zones 7 to 11.

Shade Tolerance

- Not shade tolerant, best in full sun all day.

Maintenance

- Low level of maintenance required.
- Fall overseeding may be required in cold winter climates.

Mowing

- 1/2" to 2".

Turfgrass Warranty

The grass is guaranteed to be in vigorous condition, weed- and disease-free upon delivery to the site. No other warranty is offered or implied.

Options

Regular sod comes in 16" x 72" rolls with 1/2" of soil. Each weighs approximately 45 pounds. Great for normal conditions.

Big-roll sod is 42" x 105', allowing large areas to be sodded quickly and efficiently. Great for large sports fields, parks and cemeteries.

Thick-cut sod has up to a 2" soil base that provides anchorage for the sod until its roots knit to the subsoil. Ideal for renovating a sports field that needs to be back in play within a few days.

Washed sod has had soil removed from the roots to help eliminate sod-to-soil incompatibilities and to help the sod knit to the soil faster. Reduces shipping weight.
