

# Native Grasses

Native grasses are playing a large role in the important practice of landscaping with water conservative plants. Perfect for dry cooler areas, they are the water saving choice for lawns, landscapes, golf courses, and parks.

**WEST COAST NATIVE BENTGRASS** (*Agrostis pallens*) is a cool-season bentgrass, with a rich, deep green color, and it withstands light foot traffic. It requires half the water of customary turf and half the mowing and maintenance. Or it can be left to flop, creating the look of a natural, informal meadow.

**HILLSIDE NATIVE FINE FESCUE** With minimal maintenance, this adaptable grass can be maintained as a lawn or left un-mowed. Perfect for natural landscapes, and slope stabilization. Similar to our traditional fine fescue, it is comprised of all adapted natives that have a deeper rootzone. This allows the plant to withstand longer durations of very little water, thus making it extremely drought tolerant.

## FEATURES AND BENEFITS

**Color**

> Rich deep green

**Texture**

> Medium leaf blade

**Performance**

- > Withstands close mowing heights or can be left un-mowed
- > Thrives in both full sun and partial shade
- > Extremely drought tolerant
- > Excellent wear recovery

**Climate**

> Coastal and cooler climates

**Shade Tolerance**

> Partial shade

**Mowing**

> Can tolerate low mowing heights or left un-mowed

**Options**

> Available in regular 16" x 46" 8 sq. ft. or 24" x 60" 10 sq. ft. rolls, and 42" x 105" big rolls

## FEATURES AND BENEFITS

**Color**

> Rich deep green

**Texture**

> Fine

**Performance**

- > Excellent cold tolerance
- > Slow growing, loose slim leafed blades
- > Consists of two native fine fescues

**Climate**

> Thrives in cool to warm climates USDA zones 3-8

(con't)

Life is short. Sod it!
